of the Future

## **CONCRETE BENCH 142 ER**

The bench is made of high-performance reinforced fiber concrete and natural aggregate combined with the warmth of a certified wood. The aggregate structure is available in different color combinations and consists of natural marble or granite stones. The concrete surface has a characteristic relief. The addition of protective coating on the concrete and wooden components makes the product even more resistant to aggressive weather conditions. Simple and modern, this bench model is an elegant addition to park alleys, wide streets or in front of office buildings.
